

Elite Series

Gravity Tilt Bed - Model GT14

Our Gravity Tilt Bed trailer is the definition of *easy to use*. The 14,000lb GVWR makes this trailer perfect for hauling all types of equipment. Built with either a 4', 6', or 8' stationary deck on the front of the deck, there's a place to put extra skid loader attachments or tools without tilting the bed. The tilting portion of the deck is available in either a 16', 18' deck and the ingenious design helps us maintain 82" between the fenders which is crucial for most skid loaders.

Equipped with tandem 7,000lb brake axles, this Elite Series Gravity Tilt Bed trailer provides for the easy loading and unloading of heavier equipment without the need for carrying big, bulky ramps, or flip-over ramps that create wind drag.

A pair of $\frac{3}{16}$ " hard channel fenders comes standard on our Gravity Tilt Bed model. A little added strength and durability around the construction site.

The hydraulic self-dampening cylinder provides a cushion while loading and limits the speed of the bed while unloading. A dual spring-loaded locking system (shown above left) assures that the bed will latch when loaded. The bed release latch (shown above right) allows you to unlock the bed from the driver's side. The locking pin in the release latch assures the bed is locked into position when bed is down.

The Gravity Tilt Bed is *great* for construction work! The $2\frac{5}{16}$ " adjustable height coupler (shown above left) allows the trailer to be pulled level while coupled to different vehicles models such as 1-ton pickups or dump trucks. A 12K drop leg jack and formed headache rack (shown above right) are also standard on this industrial model.

Functionality as well as a nice visual appeal surrounds this trailer everywhere you look! A recessed light channel provides a nice, clean look as well as provides protection for the LED taillights. Also, a taper cut tail allows for the bed to sit on the ground providing easy transition for loading and unloading.

A 4', 6', or 8' Stationary Deck allows you the additional deck space you might need for extra attachments, a toolbox, or even a palletted load!

Front View

Rear View

Anytime you are hauling heavy equipment, you need a multitude of places to tie down. The 14K Gravity Tilt Bed comes standard with multiple stake pockets per side and also a $\frac{1}{4}$ " rub rail over to the stake pockets. *This makes strapping down a breeze!*

If a bumper pull isn't what you need, you can upgrade to our gooseneck option (shown above left). And don't forget to add our "deck on the neck" option (shown above right on our DB14 model) for an additional deck to haul more than one attachment.

If our 82" deck width between the fenders isn't quite wide enough for your equipment, we offer an outrigger (deck extension) option (shown to left) to help get you by.

You can also choose from one of our 5 standard colors (no upgrade charge for our colors!) available: CAT Black, Smoke Grey, Carmine Red, CAT Yellow, and John Deere Greene.
